

User Manual

Problem Description: We find it difficult to create a short 300 character long message for introductions over LinkedIn. The Lost For Words app aims to solve that problem. Currently it is in “Concierge Testing phase” – wherein we are gauging the user interest in the app and human intervention is required to actually perform the message generation. In the future this step will be replaced by a powerful machine learning algorithm to produce personalized messages to people. Please follow the below steps:

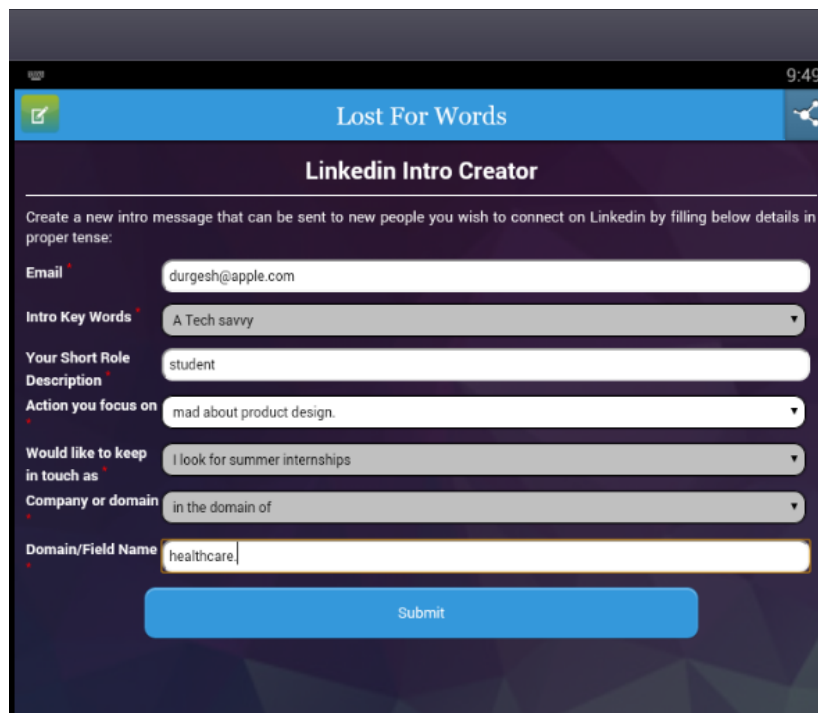

Step 1) Install lostforwords.apk in your android phone (you would need to enable install applications from an untrusted source to do this). After the application is installed you see the following screen:

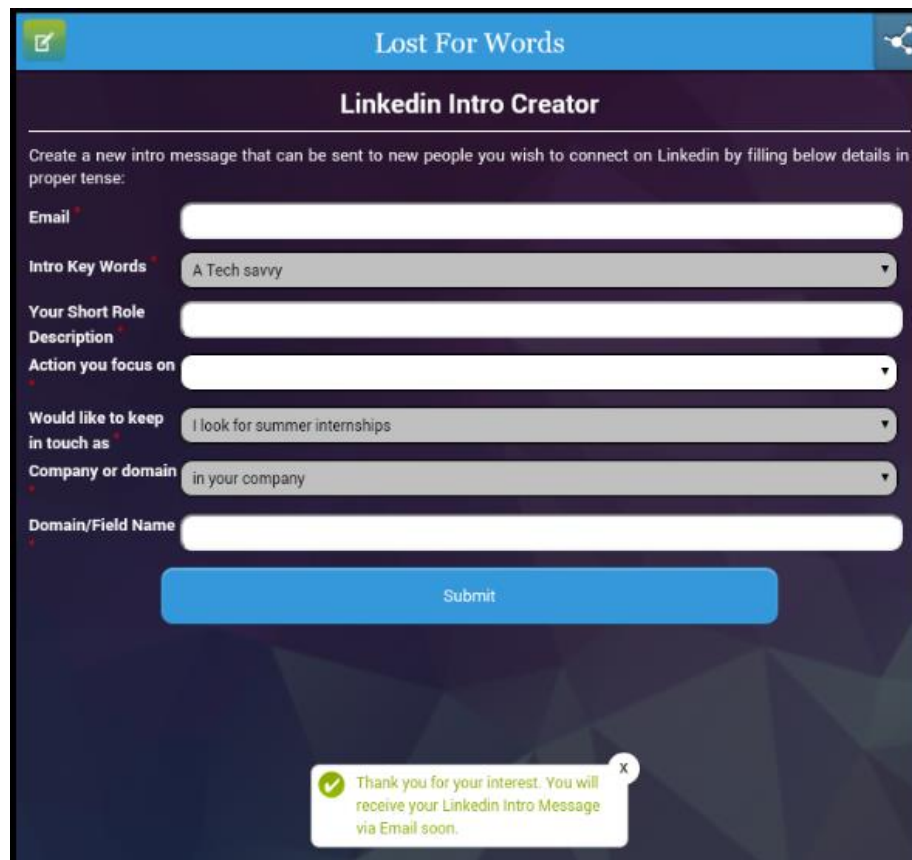

Step 2) Click on the bottom right of the phone screen on Linkedin Intro Creator button. It would open up the below screen:

Step 3) Please fill in the relevant details as shown below and click submit:

Step 4) Upon submitting the following message would be generated and you would be navigated back to home screen:

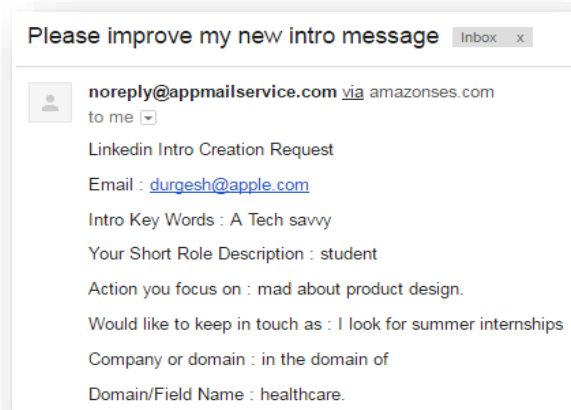

The screenshot shows a web application titled "Lost For Words" with a sub-header "LinkedIn Intro Creator". Below the header, there is a instruction: "Create a new intro message that can be sent to new people you wish to connect on LinkedIn by filling below details in proper tense:". The form consists of several input fields and dropdown menus:

- Email**: A text input field.
- Intro Key Words**: A dropdown menu with the selected value "A Tech savvy".
- Your Short Role Description**: A text input field.
- Action you focus on**: A dropdown menu.
- Would like to keep in touch as**: A dropdown menu with the selected value "I look for summer internships".
- Company or domain**: A dropdown menu with the selected value "in your company".
- Domain/Field Name**: A text input field.

Below the form is a blue "Submit" button. At the bottom of the form, there is a green checkmark icon and a message: "Thank you for your interest. You will receive your LinkedIn Intro Message via Email soon."

Step 5) Mail is delivered to the admin with your details:

The screenshot shows an email notification titled "Please improve my new intro message" from "noreply@appmailservice.com" via "amazonses.com". The email content includes the following details:

- LinkedIn Intro Creation Request
- Email : durgesh@apple.com
- Intro Key Words : A Tech savvy
- Your Short Role Description : student
- Action you focus on : mad about product design.
- Would like to keep in touch as : I look for summer internships
- Company or domain : in the domain of
- Domain/Field Name : healthcare.

Currently human intervention is required to actually perform the formation of the message, but in future if the demand for this app is justified and a lot of users utilize it, we can invest in a good machine learning algorithm and automate this step of actual creation of a proper personalized message from person A to person B.
